

Food Ordering Behaviour and Consumer Trends Analysis Using Tableau

Project Title

Food Ordering Behaviour and Consumer Trends Analysis Using Tableau

Dataset Description

The food ordering dataset contains information about customer demographics, order details, food preferences, spending patterns, delivery ratings, payment methods, order frequency, and customer satisfaction. The dataset is used to analyze consumer behavior, identify ordering trends, and provide business insights through Tableau dashboards.

Data Preprocessing Steps

- Imported the CSV dataset into Tableau.
- Verified column names and data types.
- Removed duplicate records (if any).
- Checked for missing values and handled them appropriately.
- Converted fields into appropriate data types (Date, Number, Text).
- Cleaned inconsistent values and standardized categorical data.
- Created calculated fields where necessary.
- Organized the dataset for visualization.
- Created worksheets and dashboards for analysis

Visualizations:

Count of Sheet	Delivery Fee	Order Value	Avg. Rating Given
1,000	55,901	0.54M	3
