

Project Design Phase Solution Architecture

Date	4-07-2026
Team ID	
Project Name	Food Ordering Behaviour and Consumer Trends Analysis Using Tableau
Maximum Marks	4 Marks

Solution Architecture:

The Food Ordering Behaviour and Consumer Trends Analysis Using Tableau solution collects food ordering data from datasets, preprocesses and analyzes the data using Python, stores the processed data in a database or CSV files, and visualizes insights through Tableau dashboards. The system helps identify customer ordering patterns, popular food categories, restaurant performance, sales trends, and consumer behaviour to support data-driven business decisions.

Objectives

- Collect and preprocess food ordering data.
- Analyze customer ordering behaviour and consumer trends.
- Visualize insights using interactive Tableau dashboards.
- Generate business reports to support better decision-making.
- Improve customer satisfaction and restaurant performance.
